Form a project team with three to four members. Select a study case that will be distributed in the first day of the second class. The group project carries 25% of the module. For each team, you are asked to do the followings:

1. A presentation of the case in the afternoon of the second day of the second class. You should try to add some materials within the 2 days in the second class. Powerpoint presentation is a preferred mode of presentation but not a must.
2. A set of questions specific to each study case will be distributed to the groups. Each set will contain about 6-7 questions. The questions are also available on the web with the URL http://www.comp.polyu.edu.hk/~cstyn/xian/cases.html
3. Each group would need to submit the case study with the full answers of all questions by the examination date.

The submission should be on a CD as well as hardcopies. It consists of the following components:

1. A written report to have a brief description of the case, some relevant background information, and the answers of the given questions. The report should be about 10-15 pages long with 12-point font size and 1.5 line spacing.
2. A powerpoint file highlighting the major points in the written report. It should cover the background, the questions and the answers.

Your project team should work together, but each member of your project team should be responsible for one of the given questions. Indicate clearly who is responsible for which question.
